

## FGFR Mutation Testing by RT-PCR, BALVERSA®

**CPT Code:** Please [inquire](#).

### Test Details

#### Synonyms

erdafitinib, fibroblast growth factor receptor, FGFR3, FGFR2

#### Use

##### **Urothelial Carcinoma (Bladder Cancer)**

The U.S. Food and Drug Administration (FDA) has granted accelerated approval to BALVERSA® (erdafitinib), a treatment for adult patients with locally advanced or metastatic urothelial carcinoma (UC) containing carcinogenic FGFR mutations and that has progressed during or following prior platinum containing chemotherapy. Insight Molecular Labs offers the FDA-approved companion diagnostic test, QIAGEN *therascreen*® FGFR RGQ RT-PCR Kit, to simultaneously detect 9 known carcinogenic aberrations in the FGFR3 and FGFR2 genes to identify patients more likely to respond to BALVERSA®.

#### Methodology

RT-PCR

### Specimen Details

#### Specimen Type

Formalin-fixed, paraffin-embedded (FFPE) tissue.

#### Quantity

A sufficient number of FFPE sections 4-5 µm thick, less than three months old, from which tumor area has been circled by a pathologist on a serial H&E slide and contains 100 to 500 mm<sup>2</sup> of tumor area.

#### Sample Processing

Recommended fixative is 10% neutral buffered formalin for a fixative time of at least 6 hours. FFPE specimens may be stored at ambient temperature following fixation.

#### Causes for Rejection

Insufficient tissue, unidentified tumor area, missing pathology report. If pathology services are required, please contact client services at (615) 255-8880 or [inquire here](#).

Note: Testing performed at I.G. Laboratories acting as Insight Molecular Labs

## Clinical Information

### Special Instructions

Associated clinical diagnosis and pathology report should be included with the specimen. If assistance is required to attain sufficient quantities and a marked H&E slide please inquire with client services at (615) 255-8880 or [inquire here](#). The FGFR mutation test requisition form can be found [here](#).
